

RP2040 Model Conversion and Emulation Workflow

uses
Calls convert_pytorch_to_tflite(),
convert_tflite_to_c_array()

uses
Calls build_firmware()

uses
Calls load_firmware(),
detect_object(),
get_system_stats(), etc.

Data Transfer:
'model_info' dict flows from
ModelConverter -> FirmwareBuilder
'firmware' dict flows from
FirmwareBuilder -> RP2040Emulator
